Please turn over for tips on how you can help to
reduce mosquito breeding areas on your property

**Mosquito breeding
around the home
can be greatly reduced
by following these
simple steps:**

Dispose of old cans, plastic buckets, ceramic pots, or other containers that may collect water on your property

Properly dispose of old discarded tires-these can produce thousands of mosquitoes in just one season

Clean clogged roof gutters at least annually-these can also produce a tremendous amount of mosquitoes

Eliminate water collecting in pool or boat covers

Drill holes in the bottom of recycling containers left outdoors to prevent them from collecting rain water

Turn over plastic wading pools and wheelbarrows when not in use

Change water in bird baths and animal troughs weekly

Eliminate standing water around animal troughs

Drain standing puddles, ditches, tree holes or tree stumps
